² Allocations and holdings are subject to change.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply.

A "value" style of investing emphasizes undervalued companies with characteristics for improved valuations. This style of investing is subject to the risk that the valuations never improve or that the returns on "value" common stocks are less than returns on other styles of investing or the overall stock market.

Investing in securities of "Fundamentally Mid" companies may involve greater risk than is customarily associated with investing in large companies.

The Fund may contain securities in the financial services and consumer discretionary sectors. Companies engaged in these sectors are subject to greater risks, and are more greatly impacted by market volatility, than more diversified investments.

Although the Fund will not invest in real estate directly, the REITs in which the Fund will invest will be subject to risks inherent in the direct ownership of real estate.
